

The screenshot displays the Neotick trading platform interface. It features several overlapping windows:

- Market Data Window:** Shows a list of instruments with columns for Symbol, Last, Change, and Bid/Ask. Instruments include IN Indices, Commodities, and Energies.
- Account Window:** Displays account details for CME and ESM8, including Net Change, Last Trade Price, Total Daily Vol, and Net Position.
- Order Book Window:** Shows a detailed view of orders with columns for Orders, Bid, Price, Ask, and Volume.
- Working Orders Window:** A table at the bottom with columns for ACCOUNT, ACTION, EXCHANGE CODE, INSTRUMENT CODE, QUANTITY (INITIAL), QUANTITY (CURRENT), and QUANTITY (PILLED). It includes buttons for CANCEL and CANCEL ALL.
- Audit Trail Window:** A small window in the top right corner showing a log of transactions.

Client Solutions

Client Solutions

Most will agree, a successful strategy in the capital markets today requires the very fastest and most efficient system to perform flawlessly in all market conditions. However, in many cases current low latency solutions available may expose the trader to an unacceptable level of execution risk. Whether putting on a spread and being un-hedged or getting slipped on a trade during high volatility, the impact is the same. Our solutions are built upon the principals of once proprietary tools only the largest, most successful hedge funds used through years of development.

AS A TRADER in the futures pits, our founder saw early on, that each second lost could contribute to missed opportunities and decreased chances of recovery. With trading methods across the capital markets having evolved exponentially and the proliferation of algorithmic trading, we understand the role of the new trading professional.

AS A TECHNOLOGIST, our founder participated in the early development and implementation of high performance electronic solutions to compete in the market effectively. With today's market data rates bursting at tens of thousands of messages per second, early trading systems are quickly reaching their limits...We understand the needs of a new trading solution.

We are committed to understanding our customer's challenges. We stay ahead of the curve in both our technology and support through a customer centric philosophy.

Neotick is the true convergence of almost two decades of market wisdom and knowledge.

Neostation™ Gen V

Neostation™ Gen V is our trading platform built from scratch with a split personality. Speed and stability. Built using the latest in gaming technology, Neostation™ Gen V boasts an unprecedented ability to process and display virtually hundreds of thousands of market data updates per second without interruption to the user trading experience. All within the context of a three-dimensional user interface. The integration of XNA technology not only extends the computational capability of the system, but also solves the issue of tradition screen "real estate." Traditional screens and Excel style grids are replaced with three-dimensional environments allowing for placement of ladders within a virtual trading world. Further user enhancements including graph animations and live colors representative of market characteristics are additional benefits of gaming technology.

Neotronic

Neotronic-The system API, known as Neotronic is the heart and soul of the Neostation Gen V platform and is by all standards, intelligent power. Years in development, the proprietary messaging bus holds the key to alleviating latency issues challenging legacy systems today. While traditional solutions rely on a single gateway connection, the architecture of Neotronic can dynamically seek the path of least resistance. The result is a fault tolerant, constantly optimized path to execution. Built on the principals of SOA (Services Oriented Architecture) the technology can accommodate a broad spectrum of trading verticals.

Neopipes

Neopipes- Through our dedication to agenda-setting performance we have gone beyond the software to address the last component of a truly advanced solution: The network. Neopipes is a service bureau available to Neotick clients as an added dimension to ensure the integrity of our performance. It is access to hosting and exchange connectivity to some of the most optimal network real estate, ensuring the lowest possible traffic times. As a hosted system, administrative resources remain a fraction of conventional support needed to manage a traditional system deployment. Located in the financial hubs of North America, Neopipes can connect Neotick customers to a best in class network serving more than two dozen exchanges or more than 70% of the derivative volumes globally. Neopipes will continue to expand throughout 2009 with added service to Europe and Asia.
